Address: Hrvatske republike 39, 31000, Osijek, Croatia (Home)

ABOUT ME

I remember, back in elementary school; we got the assignment to draw what we wanted to be, when we grew up. Everybody was drawing firefighters, astronauts or police officers. But not me, I drew this goofy guy with a big wrench trying to "get things to work". It supposed to be an inventor. I hope I did a good enough job drawing him. And now I'm living that drawing as a software engineer, and I get to "make things work" every day, trying always to make them go a little bit better. This is never ending passion for me.

WORK EXPERIENCE

SOFTWARE DEVELOPER – Q AGENCY – 01/12/2020 – Current – ZAGREB, CROATIA

Business or Sector: Information and communication

Technologies i used (most frequently)

- Git and GitLab
- DevOps and SysOps
- Ci/CD and infrastructure
- Makefile, Dockerfile, Docker compose and Unix Shell
- Json, Yaml, .env, XML, SOAP, csv, tsv....
- GitHub webhooks
- AWS, Azure, GCS
- Elasticsearch and ELK stack
- MySQL, PostgreSQL, SQL Server, SQLite
- NoSQL
- Redis
- Vector databases
- RAG
- PhpStorm, PyCharm, WebStorm, Vs code, Cursor
- Postman
- Sentry and SonarCube
- Docker and Kubernetes

Languages and frameworks

- php
- python
- javascript
- Laravel and Symfony (with Api platform)
- Django and Django rest framework, FastAPI
- React and nativ JS

Summery:

Developing software solutions trough entire software development life cycle
Maintaining, debugging and upgrading existing software
Delivering complete software solutions
Leading a team
Mentoring developers

Situations and solutions

Situation

- I was in charge of 4 different teams working for the same contractor, on multiple different projects. Each project had its own code base structure, which was not standardized between projects

Task

- Come up with a way to make standard code base structure to be used between projects

Action

- First I did short research between teams to determine their needs and issues they have to solve, most frequently. After that I built as started (framework) to be used between teams and standardize the way projects are developed. Framework was presented to the team's true workshop.

Result

- Code base for all teams was refactored to use new Framework. Productivity has increased. Developers mobility between projects was greatly increased and onboarding times shortened

Situation

- Due to circumstances, the internal project presentation date was cut short by the company CTO. From in 2 weeks it was shortened to in 2 days

Task

- Make AI agent interface for internal app builder, project that was focus of my team at that time

Action

- First I reused some existing code from another company project, this greatly increased delivery speed. At that time the company did not have any FE interfaces for AI agents, so I had to build the entire FE part from scratch. After I was finished I also made a short presentation and video for the meeting. The two day deadline was met.

Result

- Our project was approved for continuous development and the company was pleased with our work. This also influenced continuous use of AI tools and solutions in our company.

Individually, or as part of different teams, I contributed to building a large portion of companies infrastructure that is still used at current date.

SOFTWARE ENGINEER – CRIONIS/UNIKRN – 01/03/2019 – 22/10/2020 – NEW YORK, UNITED STATES

Business or Sector: Information and communication

Technologies i used (most frequently)

- Git
- Docker
- Postman
- Linux and LAMP
- Microservice patterns
- MVC pattern
- Rest api
- RabbitMQ
- Sublime Text
- PhpStorm
- Mysql

Languages and frameworks

- php

Summery:

Working with third-party game apis

- Blizzard, Steam, Xboxlive, Playstation network
- League of Legends, Dota2, Strarcraft2, Call of Duty, Halo, Pubg, Counter strike...

Implementing apis into existing system and building refresh data system and game awarding systems

Working on refactoring and upgrading game play awarding system (using real money and crypto currency)

Working on betting engine for games, handling user bets and odds calculation and game markets

Implementing various risk controls for betting engine and odds calculation engine

Working on administration panel and api usage statistics. Implementing various new sections of administration panel

Upgrading existing api system. Expending system with implementing new apis

Working with microservices using message broker for communication

Situations and solutions

Situation

- We had a request to add a new game on the platform. Detailed(per match) statistics where needed, but games api did not offer any

Task

- I had to implement api for fetching detailed game statistics for a single match

Action

- First I researched in detail, public api for required game integration. I found out that the game had lifetime base statistics for players. I used that to track game by game statistics by making a difference between previous state and current state, and that difference was equal to data for a single match. I used that model to integrate the game

Result

- New game was added to companies offering to users and we successfully displayed per game statistics

FULL STACK DEVELOPER – VIAHUB – 31/10/2017 – 28/02/2019 – OSIJEK, CROATIA

Business or Sector: Information and communication | **Website:** <https://www.viahub.net/>

Technologies i used (most frequently)

- Mysql
- Postgresql
- Git
- Linux and Lamp
- DevOps (Linux shell, apache2)

Languages and frameworks

- php
- python
- javascript
- java
- html
- css
- Laravel
- Django
- Spring
- Wordpress

Summery:

Building and maintaining administration system for sms traffic via http protocol.

Building and maintaining system for sms traffic statistics (charts, reports, exporting data and so on)

Upgrading and maintaining sms hubing system via http protocol, working with Karnaof tool for converting http to smpp

Working with smpp protocol

Building wordpress plugins

Building systems for sending single or bulk messages and also message campaigns

Working with third party apis

Closely working with other departments to improve productivity and IT infrastructure

Situations and solutions

Situation

- Company was looking for a way to increase productivity

Task

- Look into possibility for IT infrastructure to increase overall productivity

Action

- I held a meeting with other departments and inquired about their daily routines and ways they solve tasks. I was trying to find out if software solutions can be introduced to make their work more productive. This resulted in building various new web applications.

Result

- New applications where accepted by other departments, which significantly increased they productivity

COMPUTER SCIENCE TEACHER – HIGH SCHOOL – 31/08/2017 – 31/10/2017 – OSIJEK, CROATIA

Doing jobs and tasks related to being high school teacher

COMPUTER SCIENCE TEACHER – ELEMENTARY SCHOOL – 30/04/2016 – 31/05/2016 – OSIJEK, CROATIA

Doing jobs and tasks related to being elementary school teacher

COMPUTER SCIENCE TEACHER – ELEMENTARY SCHOOL – 31/03/2015 – 30/06/2015 – OSIJEK, CROATIA

EDUCATION AND TRAINING

27/09/2009 – 04/10/2016 Osijek, Croatia

MAG.EDU.PHY.ET.INF (MAGISTAR OF EDUCATION IN FIELDS PHYSICS AND COMPUTER SCIENCE)

Department of physics, university in Osijek

Address Gajev trg 6, 31000, Osijek, Croatia | **Website** <http://www.fizika.unios.hr/> |

Field of study Information and Communication Technologies, Education, Natural sciences, mathematics and statistics |

National classification VSS | **Type of credits** ETSC | **Number of credits** 120

27/09/2006 – 27/09/2009 Osijek, Croatia

BACCALAUREUS OF PHYSICS Department of physics, university in Osijek

Address Gajev Trg 6, 31000, Osijek, Croatia | **Website** <http://www.fizika.unios.hr/> | **Field of study** Physics |

National classification VŠS | **Type of credits** ETSC | **Number of credits** 180

LANGUAGE SKILLS

Mother tongue(s): **CROATIAN**

Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	C2	C2	C2	C2	C2
